Press pictures – Simulate welding processes with Simufact.welding 5

The cover of the new Simufact.welding 5 software box illustrates a laser-welded gear wheel, carrier of an agricultural vehicle and a lower part of an axle.

**Simulation pictures**

In car body construction, the resistance spot welding is used to connect, for example, a B-pillar of a car with a sidewall frame.

The picture shows a calculated half, taking advantage of symmetry, idealized cross-girder structure.
